ARTIFICIAL GRASS

ALWAYS A GREEN LAWN

HQ

ARTIFICIAL GRASS

Comfort and convenience all year round

Low maintenance

Pet-friendly

Always green

Suitable for various applications

Colourfast and UV-resistant

Easy to install yourself

Artificial grass: Discover the ideal solution for a low-maintenance, always green lawn. Our versatile collection, suitable for any garden, guarantees easy installation and requires minimal care.

Lifelike and eco-friendly: Enjoy the natural beauty and durability of our artificial grass. Thanks to advanced production techniques and a mix of faded and vibrant green fibers, our artificial grass is hardly distinguishable from real grass.

Durable and comfortable: Our artificial grass provides comfort and convenience all year round, regardless of the weather. Enjoy a beautiful outdoor space with little maintenance.

Various applications: Transform your garden, balcony, or camping spot into a beautiful, low-maintenance environment with our artificial grass.

5 m1x12,5 cm

GRASSTAPE

## 828
HOOK

size:
20x3x20 cm

Laying artificial grass:
a step-by-step guide

Preparation: Measure the area and always choose the same type of roll width (200 or 400 cm) to avoid colour differences. Then calculate the required amount of artificial grass, tape, pins, and infill sand. Use a pin every 30 cm for good anchoring, only at the edges where no tape is used. Additionally, you need about 6 to 8 kilos of infill sand per square meter.

1. Remove old grass: Remove old grass and level up to a depth of 5 cm.

2. Lay sand bed: Level the ground and apply a layer of 3-5 cm sand.

3. Water sand bed: Water and compact the sand for a flat surface.

4. Roll out artificial grass: Ensure the surface is smooth and pay attention to the pile direction. For multiple lanes, the pile directions must be the same.

5. Cut seams: For surfaces wider than 4 meters, check the pile direction, fold back the artificial grass, and cut off 2-3 centimeters from both sides for a seamless connection.

6. Glue seams: Place artificial grass tape under the cut edges, press the artificial grass down for a firm connection.

7. Cut to size: Cut the artificial grass to size at obstacles.

8. Secure with hooks: Prevent the artificial grass from shifting.

9. Brush up: Sweep in the infill sand and brush the grass for a natural look.

Maintenance advice

For a permanently beautiful artificial grass lawn, some simple maintenance tasks are recommended:

Keep free of leaves: Regularly remove leaves and other natural debris.

Prevent pollution: Ensure no soil or weeds from the borders get onto the artificial grass.

Optimise sand distribution: Regularly check and redistribute the infill sand in areas under swings and other high-traffic spots.

Brush up fibers: If the artificial grass lays flat due to frequent walking, brush the fibers up with a nylon broom or artificial grass brush for a fresh and vibrant appearance.

Artificial grass, always green and low maintenance
